20 กรกฎาคมนี้

Sold out! BLU GREEN TOKEN, Thailand's first digital token for environmental conservation, has closed its fundraising at 480 million baht. It announced preparations to bring the BLU token to trade on BITKUB on its first day, July 20th, providing an opportunity for digital token holders to trade in the secondary market. BLU GREEN TOKEN is Thailand's first digital token for environmental conservation that uses carbon credits from mangrove forests as an underlying asset. It received an overwhelming response from interested parties and was able to quickly close the deal, hitting its target of 400 million tokens (priced at 1.20 baht per token). Regarding the movement of Bitkub Exchange today (July 16), it announced the addition of the "BLU" coin to the system. Bitkub will officially proceed to add the BLU GREEN TOKEN (BLU) to its system, as this coin was offered in the primary market through a digital token offering system provider. The BLU coin deposit service is scheduled to open on July 16, 2026, at 11:00 AM. The buying, selling, and withdrawal services for the BLU coin will begin on July 20, 2026, from 2:00 PM onwards.

UPDATE 28 ต.ค. 65

Carbon Credit Market & Reforest Tokenization

Blu Green Token

This is the pioneering of Thailand's first green crypto/blockchain market, aiming to support carbon credit projects and stable growth, and is expected to open for reservations and trading on general exchanges in Q3.

Reforest Tokenization

The concept comes from CP Group (CP Save the World), which utilizes technology to convert real forest assets into "digital tokens," bringing profits from the sale of carbon credits as income back to the communities that systematically and sustainably care for the forests.

BAAC Carbon Credit

It is a project driving the mission of buying and selling carbon credits in the agricultural sector and community enterprise groups, supporting farmers and communities that care for trees and rubber trees by giving them a seamless, indirect income alternative.

What is a Carbon Credit?

? It is a right for environmental care.

It is a right generated from reducing greenhouse gas emissions or sequestering carbon dioxide through organizing activities or implementing forestry and clean industry projects.

✓ **Universal Certification: In Thailand,** it is analyzed and certified by TGO (Thailand Greenhouse Gas Management Organization - Public Organization under the Ministry of Natural Resources and Environment).

✓ **Conversion:** It is calculated by comparing the emission rates of other types of greenhouse gases into the form of carbon dioxide equivalent (tCO₂eq).

Types of Carbon Markets

Compliance MARKET

Compliance Market: Established under the legal regulations of countries or states that signed mutual agreements (such as the Kyoto Protocol / Paris Agreement) to directly control the greenhouse gas emissions of various businesses. If emissions exceed the limit, credits must be purchased for compensation.

Voluntary Market

Voluntary Market: Arises from the sincere cooperation of the private sector and entrepreneurs who want to build a good image, support the Net Zero concept, or want carbon reduction goals voluntarily without legal obligations.

Conditions for Selling Carbon Credits (Forestry Sector)

Thailand statistics

AREA

Must have a combined area for planting perennial trees of not less than 10 rai.

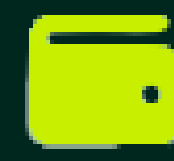

DOCUMENT

Must have legally valid land rights documents or have received a proper authorization letter.

KNOWLEDGE

Must possess knowledge and understanding of sequestration calculation methods and project document preparation.

FUNDING

Must cover the expenses of hiring external assessors (VVB) to evaluate and verify information according to standards.

Project - Forestry Carbon Credit

How to start generating income from forestry?

RICH THAILAND
GREEN NOVA X

Details and Tokenomics **RTGX**

The Richthailand Green novaX Project (RTGX) is a sustainable ecosystem that integrates carbon credits, agriculture, eco-friendly products, and blockchain technology to create real-world impact and long-term value.

FOCUS AREAS

Carbon credits,
Agriculture, Eco-friendly
products, Blockchain.

TOKEN

RTGX Token (on the BNB
Chain network).

FUNDRAISING GOAL

3,000,000 USD

UTILIZATION

Project development,
ecosystem expansion,
working capital.

RETURN MODEL

40% profit sharing
(quarterly)

SUSTAINABILITY IMPACT

Environmental, social,
and economic value.

VISION, MISSION & CORE VALUES

VISION

Aiming to be a leading green innovation company driving the carbon economy and creating sustainable value for the world and future generations.

MISSION

- Develop high-quality carbon credit projects, promote sustainable agriculture and green products, apply blockchain technology to increase transparency and value, and create economic and environmental benefits for communities and society.

CORE VALUES

SUSTAINABILITY

We grow together with nature.

INNOVATION

We create innovations for a better tomorrow.

INTEGRITY

We conduct business with transparency.

COLLABORATION

We achieve greater goals when we cooperate.

Founder

"Our mission is to build a sustainable ecosystem that can create real value for investor groups, communities, and this world. Together, we can build a cleaner (greener) future for everyone"

SONGKRAN DUTCHAYALUK

FOUNDER & CEO

Company Profile

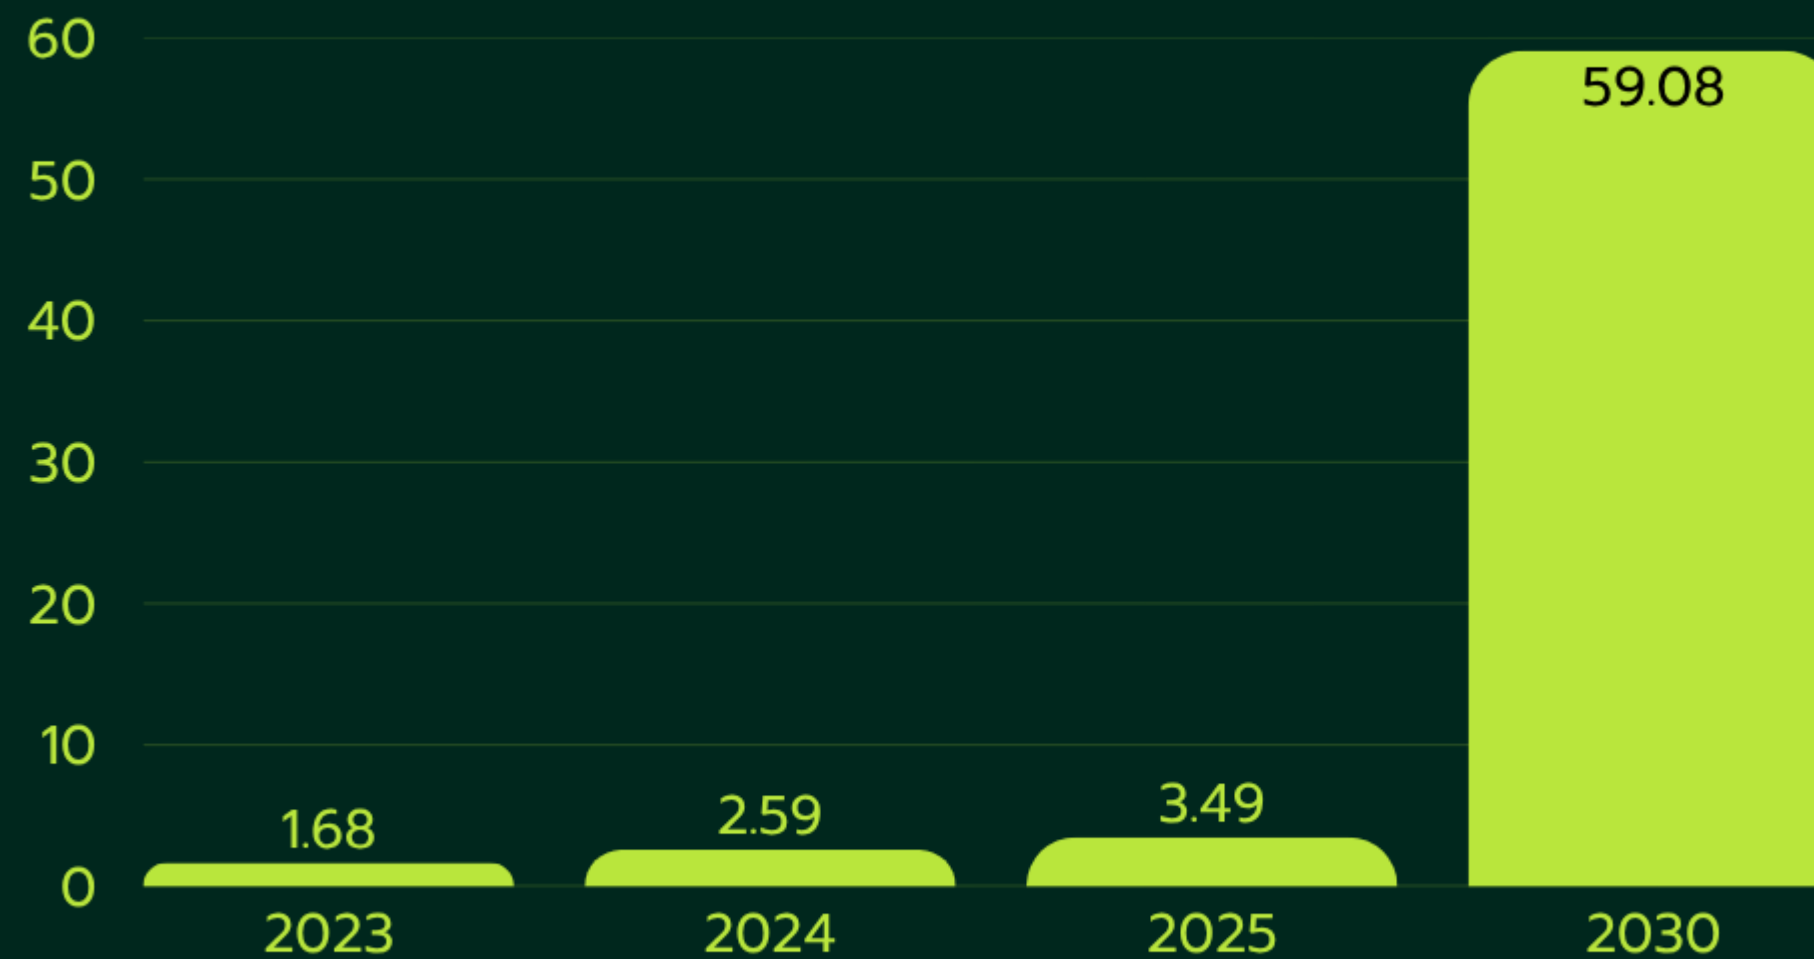

Company Name	O2 Silver Oak Co., Ltd.
Registration Number	01055568029679
Registered Date	Registered on March 27, 2015
Registered Capital	20,000,000 Baht.
Headquarters	168/1 Moo 4, Samokhae Subdistrict, Mueang District, Phitsanulok Province.
Business Characteristics	Trading, buying, and selling carbon credits for carbon dioxide (CO2) emissions or other equivalent greenhouse gases, such as tree planting and reforestation.

GLOBAL CARBON CREDIT MARKET

The global carbon credit market is growing rapidly, driven by Net-Zero Targets, climate policies, and corporate ESG commitments.

**MARKET SIZE
(USD Billion)**

- 2023: 1.68 Billion.
- 2024: 2.59 Billion
- 2025E (Estimated): 3.49 Billion
- 2030E (Estimated): 59.08 Billion

THAILAND OPPORTUNITY

Thailand has high potential for carbon credit development with abundant natural resources (forestry and agriculture), strong government support (carbon neutrality policies), high carbon sequestration potential, and opportunities for local communities and SMEs.

Abundant forestry and agricultural resources.

Government support and carbon neutrality policies.

High potential for carbon sequestration.

Opportunities for local communities and small and medium-sized enterprises (SMEs).
